

Running Jupyter

Sila, March 2021.

Make a new environment (in a folder, lets call it ex1 ?)

<https://docs.python.org/3/library/venv.html>

After the environment is activated

(Go to Scripts, activate. (You will see) the cmd prompt changes).

Install Jupyter:

<https://jupyter.readthedocs.io/en/latest/install/notebook-classic.html>

```
pip3 install --upgrade pip  
pip3 install jupyter
```

Then you are ready to run Jupyter:

(from the prompt)

Jupyter notebook

Need any libs in the notebook?

Use

Pip install mylib (in the cmd prompt)
